DETAILED ACTION

Response to Arguments

1. Applicant's arguments, see page 9-10 of the remarks, filed 8/25/2005, with respect to the double patenting rejection have been fully considered and are persuasive. The rejection of claims 1-4 has been withdrawn. The newly amended claims recite an Mn doping of 5.2 to 99 mol% manganese. The prior art does not teach or suggest this newly added feature.

Allowable Subject Matter

2. Claims 1-4 are allowed.

3. The following is an examiner's statement of reasons for allowance: The closest prior art is Schetzina (US 5,679,965), White (US 6,291,085) and Fujimura et al ("Exotic doping for ZnO thin films: possibility of monolithic optical integrated circuit"). Schetzina, White and Fujimura teach doping a single zinc oxide with a p-type dopant and manganese. Fujimura et al teaches Mn can be dissolved in a ZnO matrix for doping below 1 at%. The combination of Schetzina, White and Fujimura does not teach or suggest a single crystal p-type zinc oxide with manganese (Mn) having a ferro magnetic-transition critical temperature of 150 K or more, which only only for Mn concentrations of greater than 5.2 mol% Mn, note page 8 of the instant specification.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue
